

# Art Storage Systems

Facilities for painting collections  
in museums, galleries and depots

# WELCOME...

## Innovative and customer-oriented

Kern Studer Ltd. is specialized in development, construction and production of Art Storage Systems. As producer, we focus on cooperation with our partners, whom we supply all over the world.

The most of our products are developed by ourselves and are optimally adapted to the needs of the museum-market. Swiss ideas paired with national and international suppliers result in a mature and cost-effective product.

We are looking forward to your contact.

Kind regards  
Thomas Kern, Urs Studer and Sigi Langer

## CEILING RUNNING SYSTEMS

- 4 Aluminium rails
- 6 Steel rails
- 8 Linear guides

## FLOOR RUNNING SYSTEMS

- 10 Floor rails
- 12 Floor rollers
- 14 Art Gallery – Compact systems

## ACCESSORIES

- 16 Closed systems
- 18 Front rollers, floor guides, stoppers
- 20 Fixings, specifications
- 22 Painting hooks, shelves, label holders

## STATIC STORAGE

- 24 Fixed mesh wall
- 26 Shelf and pole racks

## TRANSPORT AND WORKING EQUIPMENT

- 28 Worktables
- 30 Easel, painting trolley

## PARTITIONS

- 32 Metal partition walls
- 34 Mesh partition walls

# Aluminium rails

Smooth running

Type DL-100: Aluminium rail with roller unit for load capacity up to 400 kg per pull out rack

Type DL-120: Aluminium rail with roller unit for load capacity up to 800 kg per pull out rack

## Ceiling running system

We use two different sizes of aluminium rails to adapt the load capacity of the pull out racks. The specially manufactured roller units with steel ball bearings and high-loadable polyamide rollers are extremely smooth. A real alternative to the linear guided system.

## Ceiling running system

We use two different sizes of steel rails to adapt the load capacity of the pull out racks. The roller units with steel ball bearings and steel rollers are robust and high-loadable. An inexpensive alternative to aluminium rails.

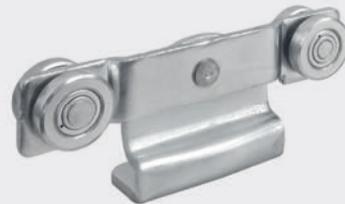

# Steel rails

Robust and proven

Type M-40: Steel rail with roller unit for load capacity up to 800 kg per pull out rack

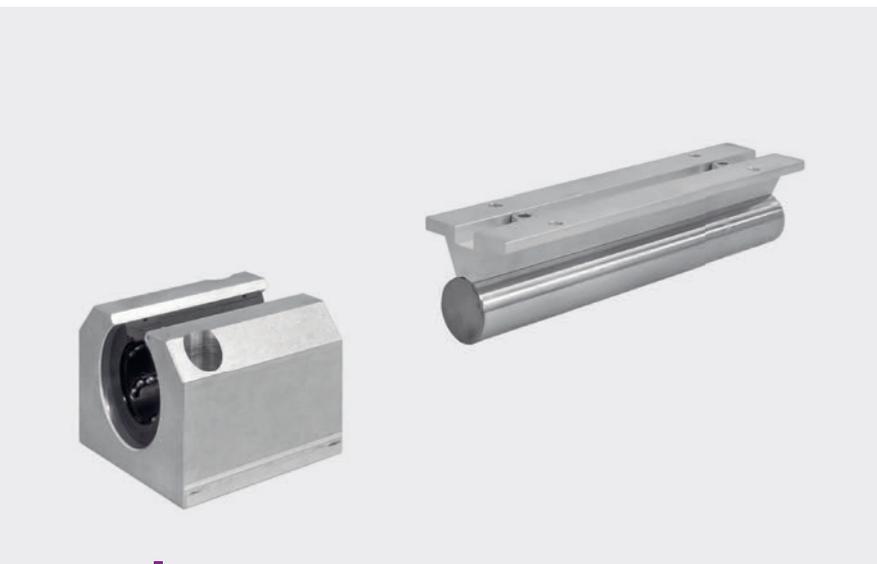

Type M-50: Steel rail with roller unit for load capacity up to 2000 kg per pull out rack

# Linear guides

Vibration and shock-free

Type L-30: High-precision hardened and honed steel shafts

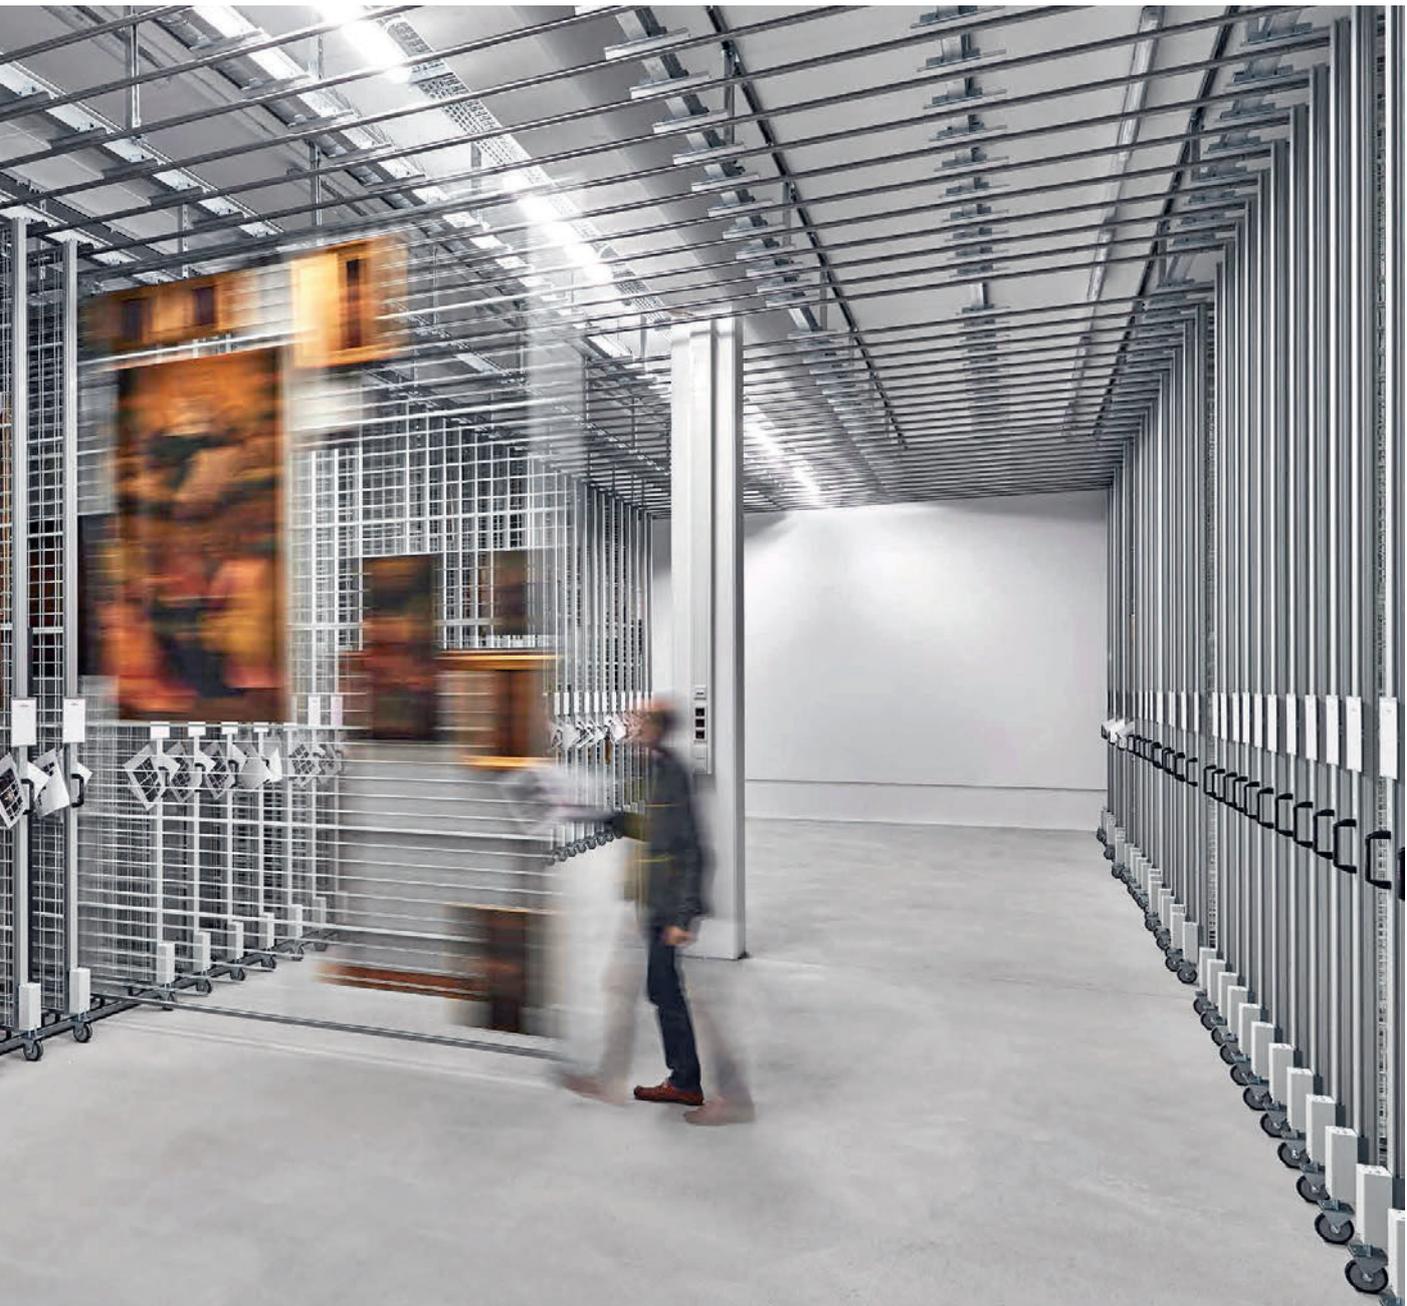

Linear guide with high-loadable ball bearings for load capacity up to 2000 kg

## Ceiling running system

The linear guide with ball bearings runs completely vibration-free on the high-precision linear shafts and have a very low breakaway force. Linear guide systems are suitable for large and small pull out racks to carry high loads.

## Floor running system

We provide this system as standard with wooden platform, alternatively with aluminium platform or with concreted floor rails. With the permanent guidance above and below we achieve a very precise straight run. The rollers with steel ball bearings have a high load capacity and run smoothly.

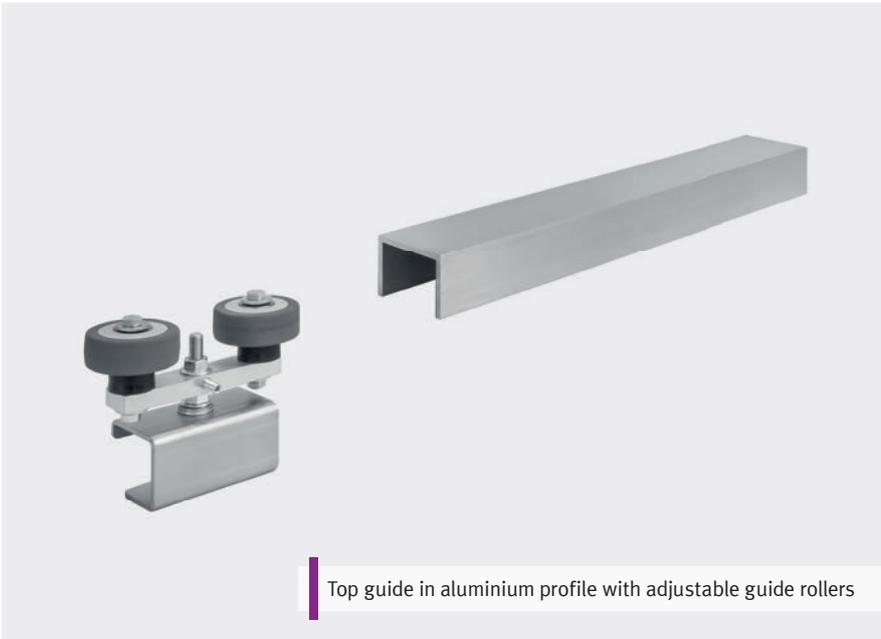

# Floor rails

Precise running and permanently guided

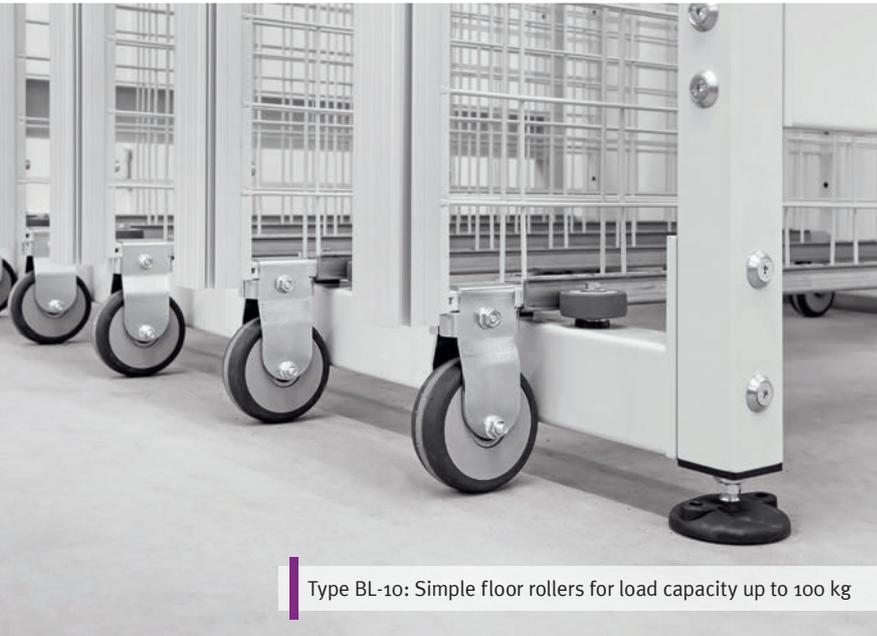

Type BL-30: Aluminium rails with rollers for load capacity up to 2000 kg

Top guide in aluminium profile with adjustable guide rollers

# Floor rollers

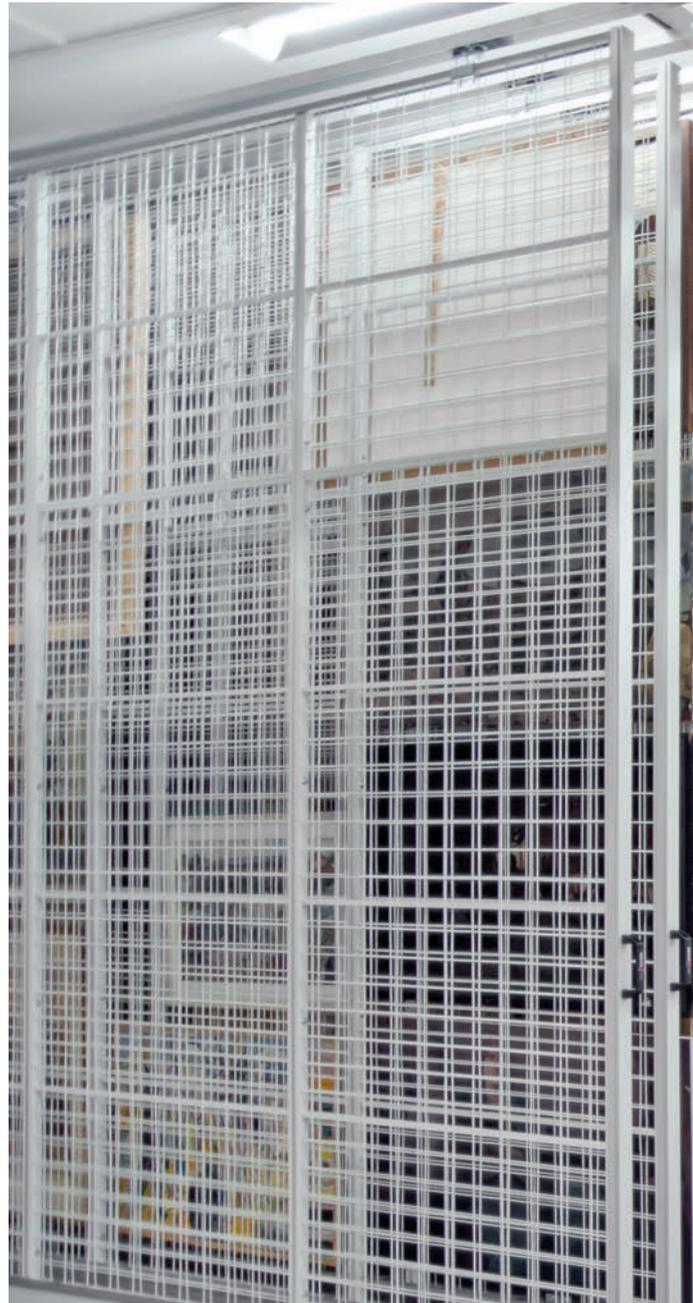

Simple and inexpensive

Type BL-10: Simple floor rollers for load capacity up to 100 kg

Top guide in aluminium profile with adjustable guide rollers

### Floor running system

This system is suitable for small pull out racks with low loads. The floor should be as flat as possible. The rollers have a steel ball bearing and a rubber tread.

## Floor running system

This system is suitable for galleries, restorers or artists with small space requirements. We offer different basic modules in width and depth. The system is modular and can be extended on both sides. The centre distance of the pull out racks is fixed at 300 mm.

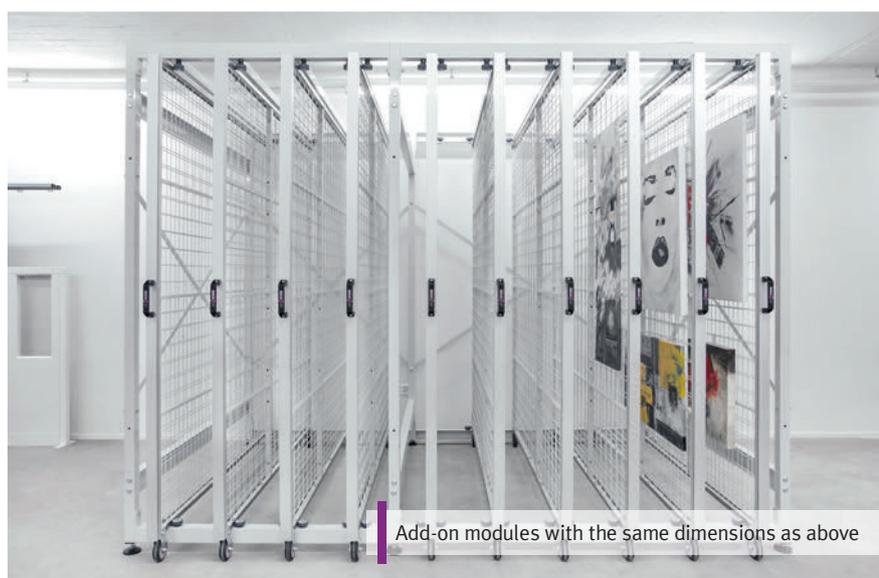

*Paintings: Art Pfeffer*

# Art Gallery

Compact and modular

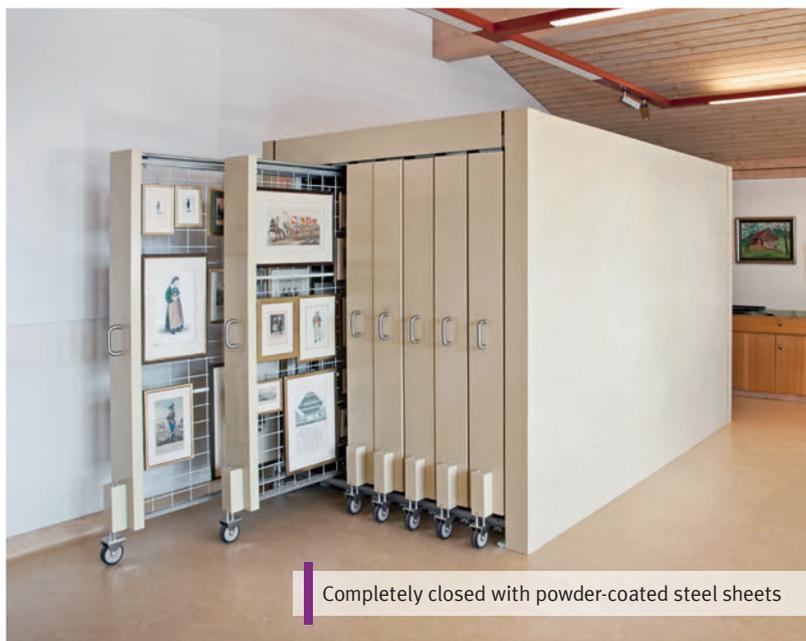

Basic modules with 3 up to 7 pull out racks, 3 depths 1300/2000/2400 mm

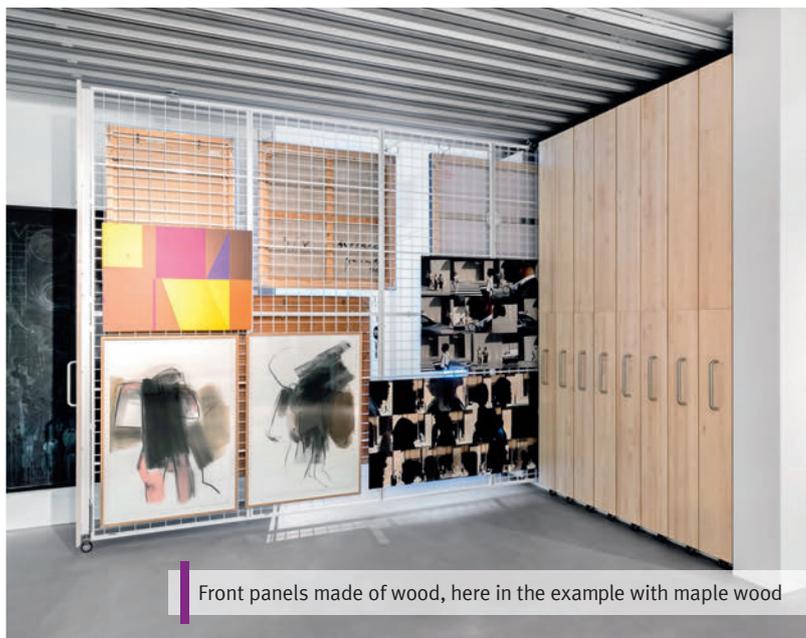

Add-on modules with the same dimensions as above

# Closed systems

Front panels or completely closed

Completely closed with powder-coated steel sheets

Front panels made of wood, here in the example with maple wood

## Closed systems

All our systems can be equipped closed and provide optimal privacy protection. You can choose between powder-coated steel sheets and various types of wood. For additional security, each pull out rack can be locked individually if required.

## Accessories

We provide you several accessories for the safe handling of the pull out racks.

## Mesh specifications

The mesh mats are welded on both sides of the surrounding steel frame and are powder-coated. The standard mesh size is 100 x 80 mm (w x h), the wire Ø is 4 mm. We have several standard elements in stock.

Heights: 2200, 2750, 3300, 3850, 4400 mm, widths: 700, 800, 900, 1000, 1100, 1200, 1300 mm

# Fixing types, specifications

## Floor and ceiling fixing

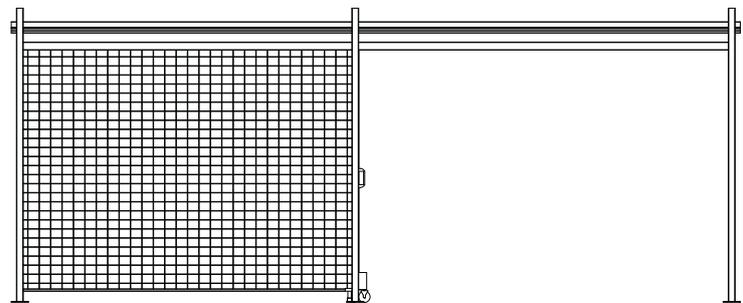

### 3-part system

The painting racks can be pulled out on both sides to the middle corridor. With this version, you can optimally use the space available. You have 33% more storage capacity with the same area compared to a 2-part system.

### 2-part system

The painting racks can be pulled out on one side to the sideways corridor. With this version you use half of the available space. This may be necessary if doors or windows are disturbing.

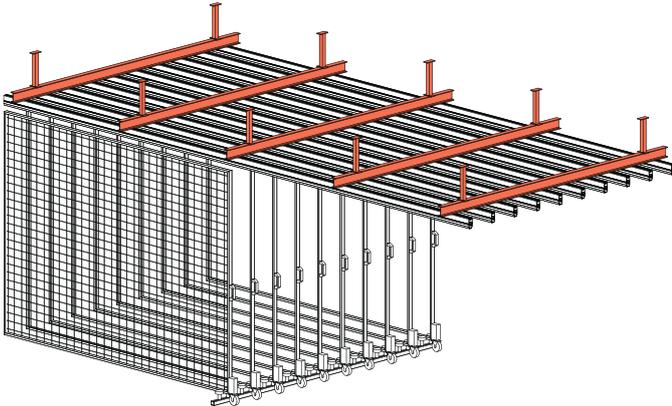

### Fixing types

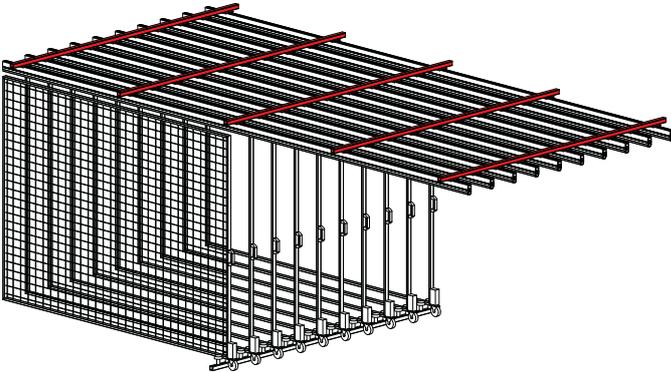

We provide you three different types of fixing. The freestanding version is required if a lot of technology such as ventilation, cable trays and lamps are provided on the ceiling. If the floor load is not sufficient, the system can be installed either directly on the ceiling or suspended from the ceiling.

Fixing to the floor with freestanding steel construction

Fixing to the ceiling with suspended steel construction

Fixing directly to the ceiling

### Static calculation

We prepare a static calculation for all units. Maximum load of the steel beams bending moments and area loads are shown. In this way we guarantee your safety and we can support you in the planning of a new building. With an existing building we can adapt to the situation.

## Accessories

- Fig. 1: Painting hook INOX single, load capacity up to 10 kg, with snap-in for secure hold
- Fig. 2: Painting hook INOX single, load capacity up to 30 kg, with snap-in for secure hold
- Fig. 3: Painting hook INOX double, load capacity up to 50 kg, with snap-in for secure hold
- Fig. 4: Painting hook INOX type M, load capacity up to 70 kg, 2 clamps for secure hold
- Fig. 5: Painting hook INOX type L, load capacity up to 70 kg, 2 holes for fixing to the wire
- Fig. 6: Label holder, size A4, A5, A6, upright or across
- Fig. 7: Drop down safety accessories for shelves
- Fig. 8: Shelves to hang in, height adjustable
- Fig. 9: Shelves with drop down safety

# Painting hooks, shelves, label holders

Safe attachment of paintings

## Fixed mesh wall

This type of painting storage is suitable wherever free walls are available. The mesh panels can also be fixed directly on the existing steel structure of the Art Storage System.

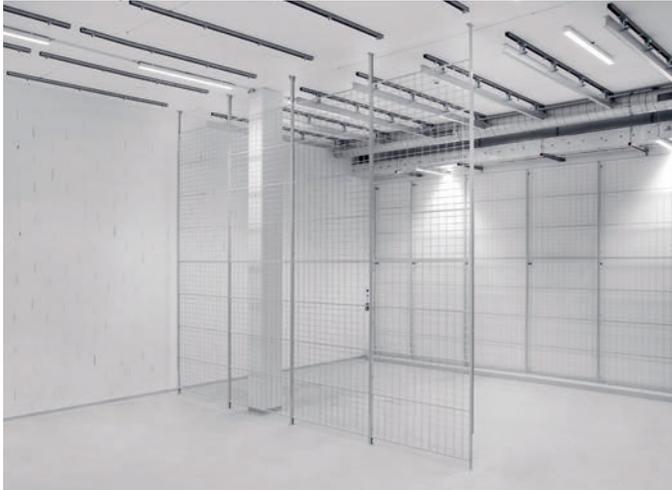

Specifications: The mesh mats are welded on one side of the surrounding steel frame and are powder-coated. **The standard mesh size is 100 x 80 mm (w x h), the wire Ø is 4 mm.** We have several standard elements in stock.

Heights: 2200, 2750, 3300, 3850, 4400 mm, widths: 700, 800, 900, 1000, 1100, 1200, 1300 mm

# Fixed mesh wall

Static painting storage

**Fixed freestanding mesh panels**

Load carrying with consoles on the floor and fixing with consoles to the ceiling.

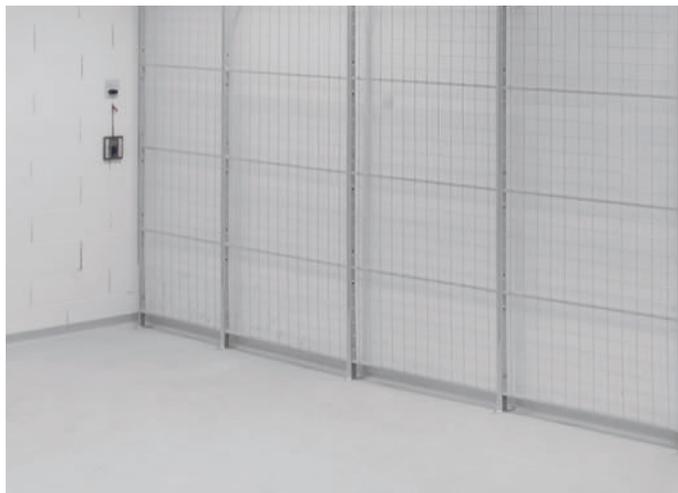

**Fixed mesh panels with pedestal**

Pedestal as a collision protection and load carrying for the paintings.

**Fixed mesh panels**

Fixed directly to an existing wall using spacers.

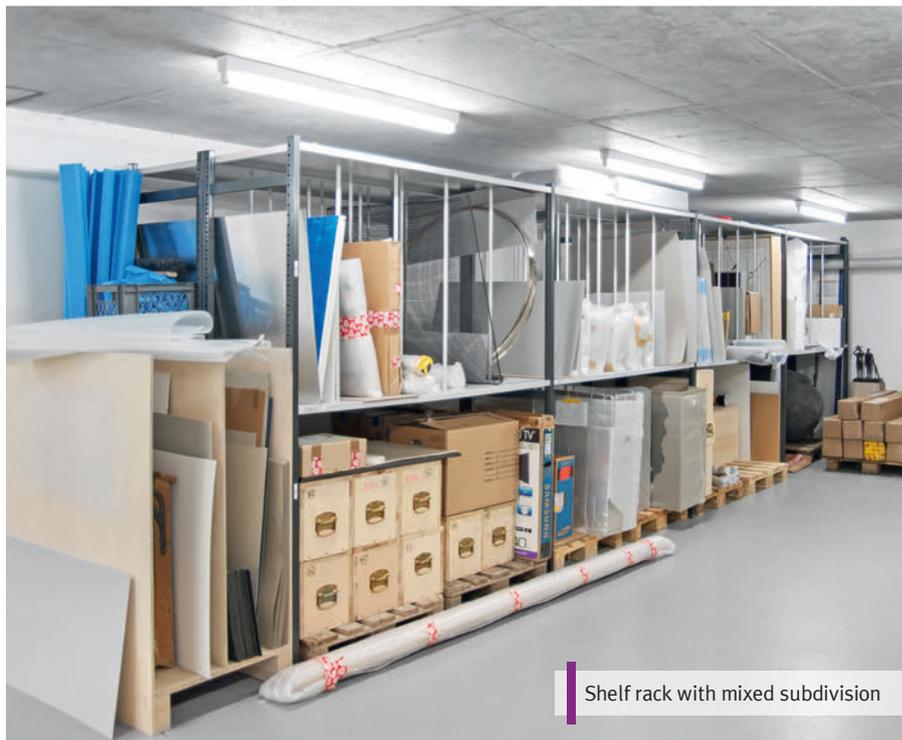

**Fixed mesh panels without pedestal**

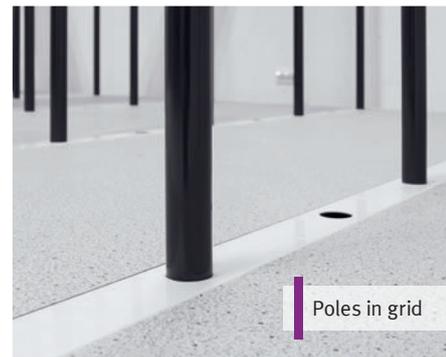

Load transfer to the floor via consoles and fixing to an existing wall using spacers.

# Shelf and pole racks

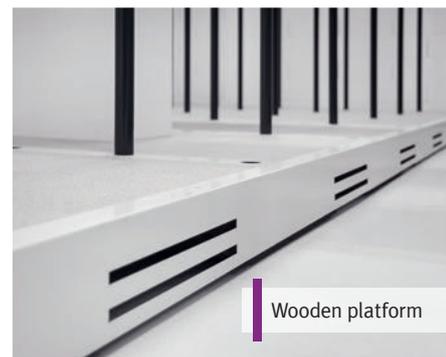

Static painting storage

Shelf rack with mixed subdivision

Poles in grid

Wooden platform

Shelf rack with poles

Fixing to the ceiling

## Shelf and pole racks

The pole rack is suitable for storing large objects. The height is adapted to the space of the room and can be individually equipped with or without a wooden platform. For smaller objects we provide shelving racks with or without additional subdivision by poles.

Pole rack

Hand crank

Electric motor

Socket strip

Table connector

# Worktables

Modular and moveable

## Worktables for the museums-market

Flexible table system for universal use in museums. Individual tables, mobile or stationary, can be used individually or, if required, combined to form large work surfaces.

Unrolling and cutting devices for foils or paper simplify the professional packing of exhibits. These are integrated in the table or are also available as individual cutting devices.

- ✓ Modular system with many options
- ✓ Modern look with uniform design
- ✓ Very flexible system, expandable at any time

## Easel, painting trolley

Support during restoration and transport

## Easel

This tool can simplify your work and assist you in restoring and photographing objects. The easel is electrically adjustable in height and can also be turned electrically forwards and backwards, so that the object is always quickly and easily in the right position or at the right working height at the push of a button.

## Painting trolley

The very stable construction allows the safe transport of large and small paintings. The picture trolley is equipped with 4 castors, 2 of them have a stop function.

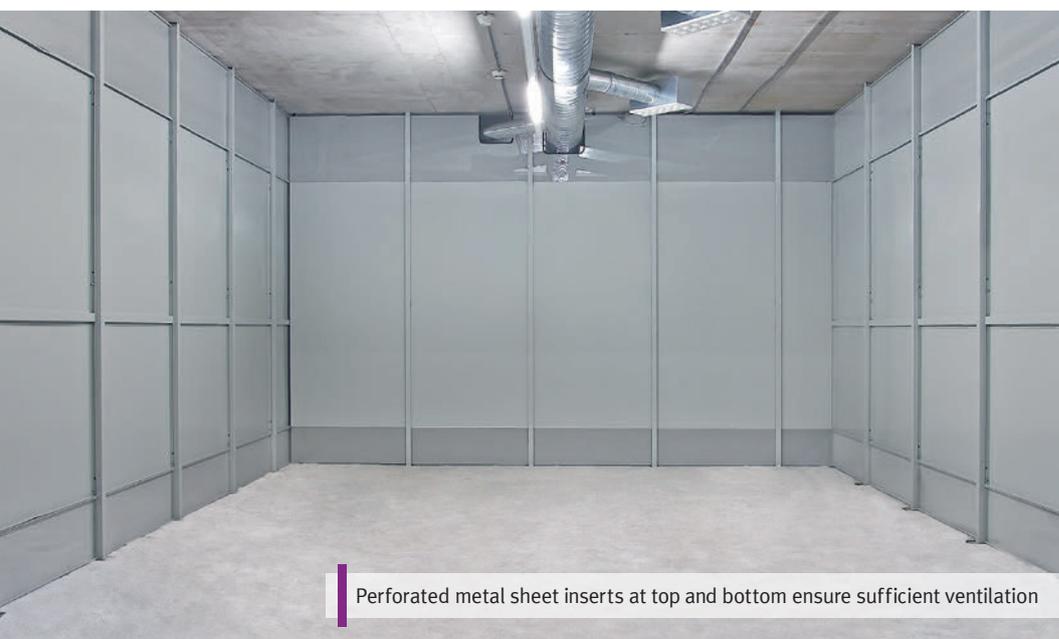

# Metal partition walls

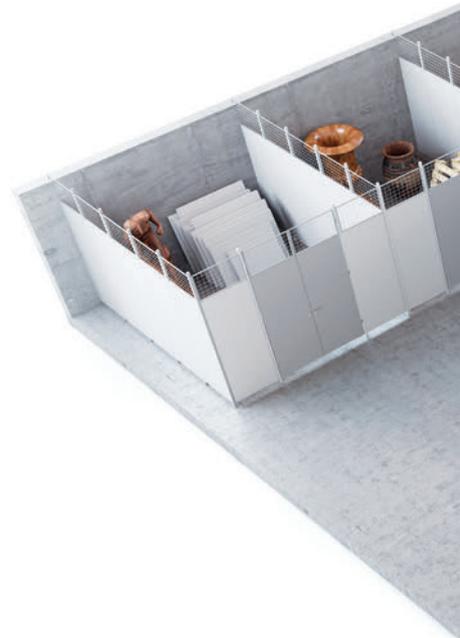

Storage boxes with privacy screen

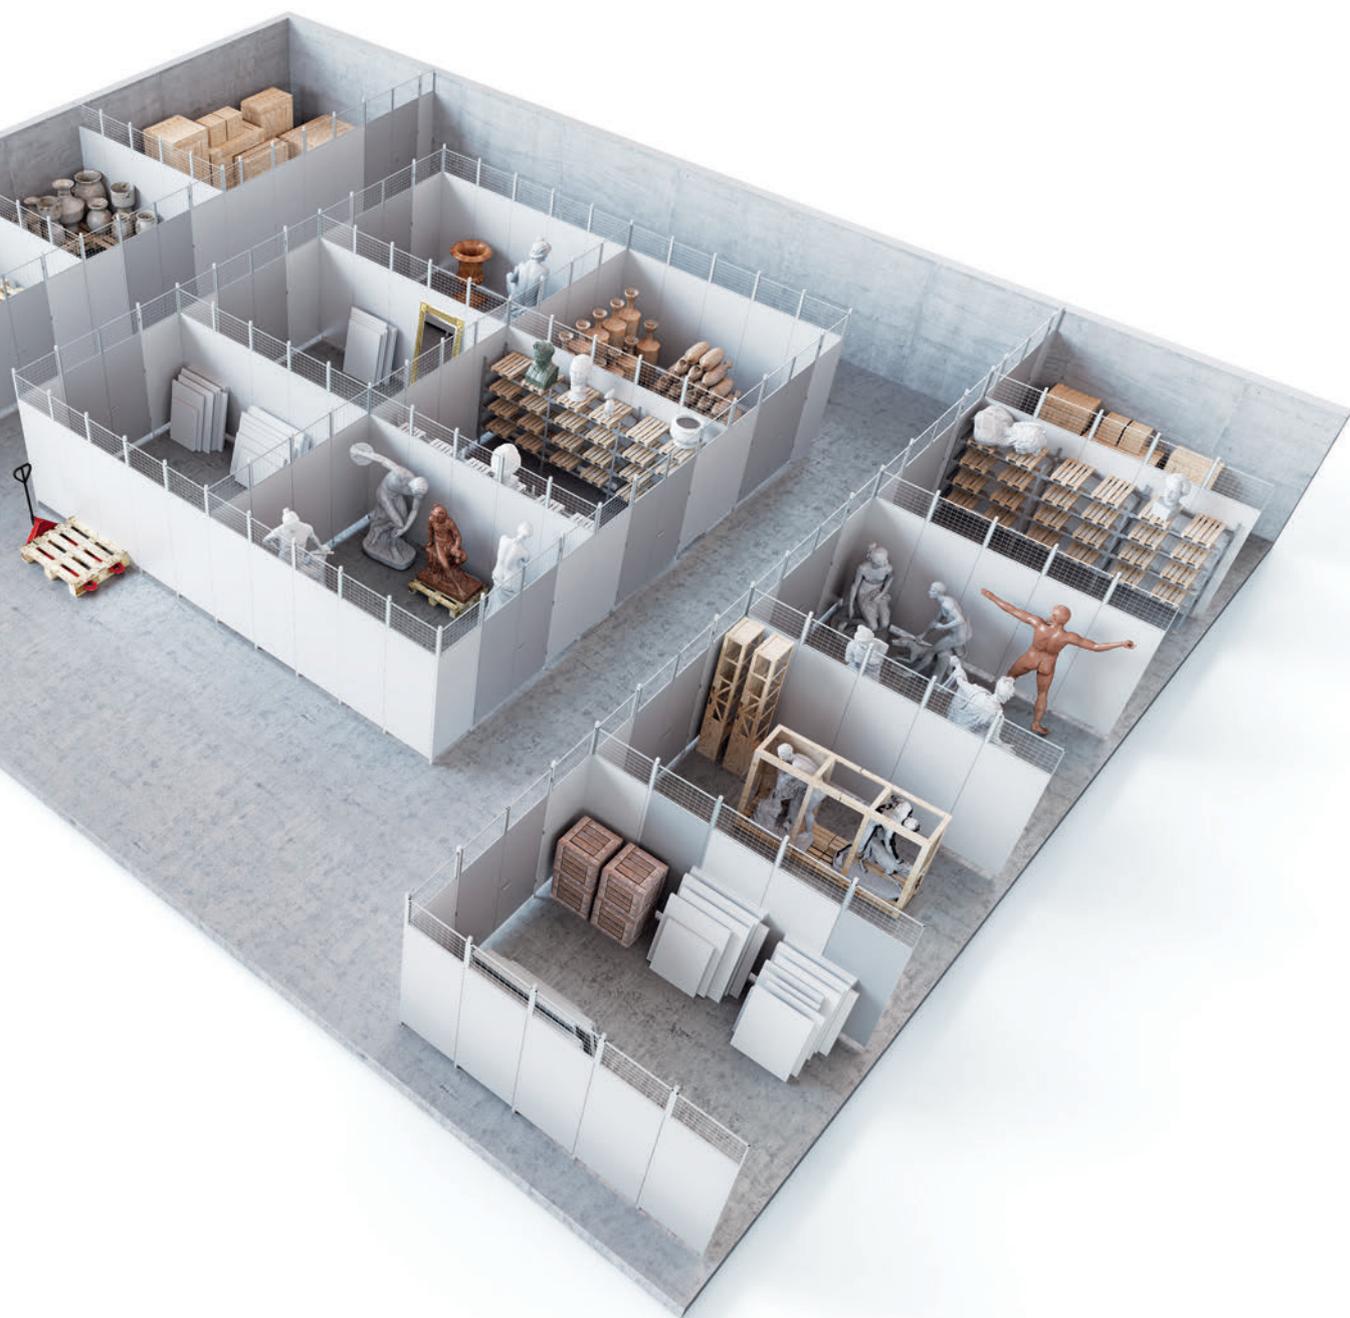

Doors lockable by cylinder lock

Perforated metal sheet inserts at top and bottom ensure sufficient ventilation

### **Metal partition walls**

Secure storage of art objects with the MultiGuard partition wall system, it provides good privacy protection for your collection. The sheet metal elements are made of steel. The surface is powder-coated.

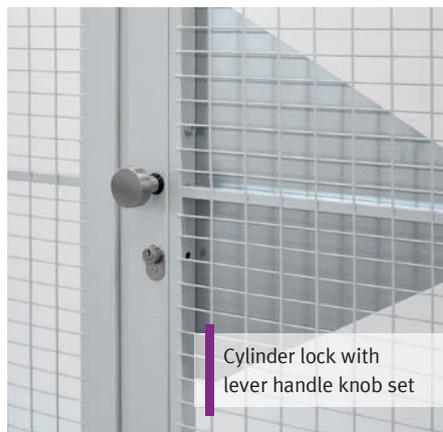

### **Mesh partition walls**

Secure storage of art objects with the MultiSafe partition wall system, so you have a good overview of your collection. The mesh panels are made of steel. The surface is powder-coated.

# Mesh partition walls

Storage boxes with a clear view

Cylinder lock with lever handle knob set

Cylinder lock with handle set

Security locking system for controlled access
